# The Database of International Futures (IFs)

## Introduction

This paper provides basic information about most of the data sources used in creating the IFs database. In all cases, data from the original sources have been processed by the IFs project into the standard format of the IFs database to facilitate ease in analysis across series (for instance, by using a fixed country set with standard country names and codes; relying upon a format that uses rows for countries and columns for years, with one data series per table). Data have frequently been converted into standard units used by IFs (for instance, millions for population data, billions for economic data, and billions of barrels of oil equivalent for energy). Missing value codes have been converted to nulls.

## Data Sources

### **A.T. Kearney/Foreign Policy Magazine: Globalization Index**

The A.T. Kearney/*Foreign Policy* annual globalization index is a joint effort of A.T. Kearney ([www.atkearney.com](http://www.atkearney.com)), a management consulting company, and *Foreign Policy* magazine ([www.foreignpolicy.com](http://www.foreignpolicy.com)), a publication of the Carnegie Endowment for International Peace.

The sixth release of the A.T. Kearney/Foreign Policy Magazine Globalization Index of its kind, published in 2006, ranks 62 countries. Thirteen variables, used for constructing the index, have been grouped into four baskets: economic integration, personal contact, technology, and political engagement.

This index estimates economic integration by combining data on trade, foreign direct investment, portfolio capital flows, and income payments and receipts. The index gauges technological connectedness by including Internet users, Internet hosts, and secure servers. The index assesses political engagement accounts stock of the number of international organizations and U.N. Personal contact includes information on country's international travel and tourism, international telephone traffic, and cross-border transfers, including remittances.

For the construction of the globalization index, data were collected from a wide range of well-recognized sources, including the World Bank's *World Development Indicators*, IMF's *International Financial Statistics Yearbook*, International Telecommunication Union's *Yearbook of Statistics*, the Secure Server Survey available online from Netcraft, and CIA's *World Factbook*.

### **British Petroleum: Statistical Review of World Energy**

Every year British Petroleum produces a small volume that contains information on the production, consumption, trade, and pricing of key primary energy sources including oil, natural gas, coal and nuclear energy. They also provide data on energy reserves. In recent years they have begun providing information on the web. See <http://www.bp.com/subsection.do?categoryId=95&contentId=2006480>.

### **Centre for International Development (CID), Harvard University**

The Center for International Development (CID) at Harvard University aims to advance human well-being and social progress in the developing world by expanding the understanding of development challenges and offering viable solutions to problems of global poverty. To further its mission, the CID provides over a dozen datasets on variables such as education, trade openness, country indebtedness, and geography and economic development. A CID working paper ("International Data on Educational Attainment: Updates and Implications," CID Working Paper No. 42, April 2000) by Robert J. Barro and Jong-Wha Lee provides data estimates on educational attainment for the population over age 15. The data set comprises at least one observation for 142 economies, of which 109 have complete information at five-year intervals from 1960 to 2000. See <http://www.cid.harvard.edu/cidwp/pdf/042.pdf>.

### **Center for International Development and Conflict Management (CIDCM): Polity IV Project**

The Polity data series, originally designed by Ted Robert Gurr, contains coded annual information on regime and authority characteristics for 161 independent states (fundamentally those with greater than 500,000 total population) in the global state system and covers the years 1800-2002. The Polity database is housed at Center for International Development and Conflict Management (CIDCM), at the University of Maryland, College Park series and is available at <http://www.systemicpeace.org/polity/polity4.htm>. Monty Marshall has been kind in providing recent updates to the IFs project.

The Polity IV dataset provides substantial information on regime types and behavior. Polity codes were originally assigned according to three general categories of authority patterns: executive recruitment, executive constraints, and political competition. Later, these general categories were disaggregated into six component variables. IFs has drawn primarily on their indices of democracy and autocracy.

### **Center for International Development and Conflict Management (CIDCM): Minorities at Risk (MAR) Project**

The Minorities at Risk (MAR) Project is a University of Maryland based research project that monitors and analyzes the status and conflicts of politically-active communal groups

in all countries with a current population of at least 500,000. The MAR project currently maintains data on 284 politically active ethnic groups. The centerpiece of the project is a dataset that tracks groups on political, economic, and cultural dimensions from 1960 to the present. See <http://www.cidcm.umd.edu/mar/>.

### **Center for International Development and Conflict Management (CIDCM): State Failure Project**

State failure datasets provide comparative information on cases of total and partial state failure during 1955 to 2001 in independent countries populated by more than half million people. The project was initiated by Ted Gurr of University of Maryland in 1994 and lists state-failure events, indicating the starting and ending dates for all serious cases of four different kinds of internal political crisis—revolutionary wars, ethnic wars, adverse regime changes, and genocides.

The list of state failure events has been compiled from multiple sources by researchers at the Center for International Development and Conflict Management (CIDCM), University of Maryland, and is available at (link does not work) <http://www.cidcm.umd.edu/publications/publication.asp?pubType=paper&id=9> (link to State Failure Task Force Report: Phase III Findings Aug 2003). The project has kindly made the data available.

In the IFs system, data series are available on each of the four types of state failure and also on consolidated events across one or more types of failure. Series have been included for initial events, for initial and continuing events, and for event magnitude. In addition, data series have been added for analytic purposes that, for internal war (revolutionary wars, ethnic wars, and genocides) and for instability (adverse regime changes), show average probabilities over all years, the last 30 years, last 20 years, and last 10 years.

### **Carbon Dioxide Information Analysis Center (CDIAC)**

The Carbon Dioxide Information Analysis Center, which includes the World Data Center for Atmospheric Trace Gases, has served as the primary climate-change data and information analysis center of the U.S. Department of Energy (DOE) since 1982. CDIAC's data holdings include records of the concentrations of carbon dioxide and other radiatively active gases in the atmosphere; the role of the terrestrial biosphere and the oceans in the biogeochemical cycles of greenhouse gases; emissions of carbon dioxide to the atmosphere; long-term climate trends; the effects of elevated carbon dioxide on vegetation; and the vulnerability of coastal areas to rising sea level. See [http://cdiac.ornl.gov/trends/emis/tre\\_coun.html](http://cdiac.ornl.gov/trends/emis/tre_coun.html).

### **Cingranelli-Richards (CIRI) Human Rights Data Project**

The Cingranelli-Richards (CIRI) Human Rights Dataset contains standards-based quantitative information on government respect for 15 internationally recognized human

rights for 195 countries, annually from 1981-2007. IFs uses data on level of empowerment, physical integrity index, and levels of women's economic, social, and political rights. Information about human rights practices is obtained from a careful reading of the annual United States Department of State's Country Reports on Human Rights and Amnesty International's Annual Report. See

<http://ciri.binghamton.edu/index.asp>.

#### **Cohen and Soto Education Database**

A 2001 study by Daniel Cohen & Marcelo Soto provides survey data on educational attainment for different age groups. The survey data is from 1960 to 2000 with data points every five years. See: Daniel Cohen & Marcelo Soto (2001) "Growth and Human Capital: Good Data, Good Results," OECD Development Centre Working Papers 179, OECD Development Centre.

#### **Diehl, Paul: Contiguity Data**

Professor Paul Diehl, professor at the University of Michigan, has built a database that represents the degree of contiguity or distance between pairs of countries. Because of the close relationship between distances separating countries and the extent of cooperation and conflict between them, this measure is very useful in the international political formulations of IFs. Paul Diehl was kind enough to provide access to his database.

Because of its dyadic characteristic, these data are not available for analysis with the statistical tools of IFs. They are used by the preprocessor and a variable in IFs carries information on contiguity for the model. See

<http://www.correlatesofwar.org/COW2%20Data/DirectContiguity/DCV3desc.htm>.

#### **Economist Intelligence Unit (EIU): E-Readiness rankings 2008**

Since 2000, the Economist Intelligence Unit (EIU) has assessed the world's largest economies on their ability to absorb information and communications technology (ICT) and use it for economic and social benefit. The 2008 E-Readiness rankings measure data for 70 countries regarding the quality of ICT infrastructure and the ability of consumers, businesses and governments to use ICT to their benefit. The EIU evaluates nearly 100 separate criteria, both qualitative and quantitative, for each country. These criteria are scored on their relative presence (or lack thereof) in a country's economic, industrial or social landscape. The criteria are organized into e-readiness, such as the connectivity environment, government investment and policy, and the underlying social and cultural attitudes surrounding Internet adoption. See

[http://a330.g.akamai.net/7/330/25828/20080331202303/graphics.eiu.com/upload/ibm\\_ereadiness\\_2008.pdf](http://a330.g.akamai.net/7/330/25828/20080331202303/graphics.eiu.com/upload/ibm_ereadiness_2008.pdf).

#### **Environmental Performance Index (EPI)**

The Environmental Performance Index (EPI) ranks 149 countries on 25 indicators tracked across six established policy categories: Environmental Health, Air Pollution, Water Resources, Biodiversity and Habitat, Productive Natural Resources, and Climate

Change. The EPI is a joint project between the Yale Center for Environmental Law and Policy and the Center for International Earth Science Information Network (CIESIN) at Columbia University, in collaboration with the World Economic Forum and the Joint Research Centre of the European Commission. See <http://www.yale.edu/epi/>.

### **Environmental Sustainability Index (ESI)**

The Environmental Sustainability Index (ESI) is an Initiative of the Yale Center for Environmental Law and Policy (YCELP) and the Center for International Earth Science Information Network (CIESIN) of Columbia University, in collaboration with the World Economic Forum and the Joint Research Centre of the European Commission. Data is provided for 146 countries for 2001, 2002, and 2005. See <http://www.ciesin.columbia.edu/indicators/esi/index.html>.

### **European Commission: Eurostat**

Eurostat is the Statistical Office of the European Communities. Its mission is to provide the European Union (EU) with high-quality statistical information that enables comparisons between countries and regions. Eurostat provides data on the following themes: economy and finance; population and social conditions; industry, trade and services; agriculture and fisheries; external trade; transport; environment and energy; and science and technology. Major publications include the Eurostat Yearbook and the Pocketbook on Key Figures in Europe. Data is available for the period from 1995-2008. The IFs system uses data on internet use, access, and type of connection by firms and households. See <http://epp.eurostat.ec.europa.eu/portal/page/portal/eurostat/home>.

### **European Information Technology Observatory (EITO)**

Founded in 1992, the European Information Technology Observatory (EITO) is a European non-profit organization dedicated to the development and strengthening of Information Technology (IT) in Europe. EITO is funded by the EC and the OECD and provides reports with data on Information Technology (IT), Telecommunications, Consumer Electronics, and the Internet. The IFs system uses data on the number of internet users and computer sales for over 50 countries from 1998-2002. See <http://www.eito.com/datafinder.htm>.

### **The Fraser Institute**

The Fraser Institute is an independent non-partisan research and educational organization based in Canada. Its annual Economic Freedom of the World report, uses 42 distinct pieces of data to measure economic freedom in 141 nations from 1970 to 2007. See <http://www.freetheworld.com>.

### **Finland Futures Research Centre (FFRC)**

During the European Commission-sponsored TERRA project, in which IFs participated, the Finland Futures Research Centre identified a number of data sources upon which IFs has drawn. In addition, they provided processed information on labor force size, by type of labor, from the Organization for Economic Cooperation and Development (OECD). See <http://www.tse.fi/EN/units/specialunits/ffrc/Pages/default.aspx>

### **Freedom House**

Freedom in the World is an institutional effort by Freedom House to monitor the progress of political rights and civil liberties. It emerged in 1955. The official website of Freedom House is <http://www.freedomhouse.org/>.

The Freedom in the World 2008 survey contains reports on 192 countries and 15 related and disputed territories. Each country report begins with a section containing basic political, economic, and social data arranged in the following categories: polity, economy, population, purchasing power parities (PPP), life expectancy, religious groups, ethnic groups, capital, political rights, civil liberties, and status (free, partly free, or not free). Freedom House has been publishing annual yearbook since 1978.

Since 1989, Freedom House has been conducting surveys and gathering information from a wide range of sources, including many human rights activists, journalists, and political figures around the world. The survey team also consults a large array of published materials, ranging from the reports of other human rights organizations to regional newspapers and journals.

Apart from surveys, Freedom house obtains data from CIA Factbook, United Nations Development Program Human Development Report, The World Almanac and Book of Facts. The political rights and civil liberties categories contain numerical ratings between 1 and 7 for each country or territory rated, with 1 representing the most free and 7 the least free. Each country report is divided into two parts: an overview and an analysis of political rights and civil liberties. While the overview provides a brief historical background and a description of major recent events, the political rights and civil liberties section summarizes each country or territory's degree of respect for the rights and liberties.

### **The Fund for Peace**

The Fund for Peace is a research and educational organization that works to prevent war and alleviate the conditions that cause war. The organization's Failed States Index ranks the social, political and economic situation of 171 countries based on 12 indicators of risk with the goal of promoting greater stability worldwide. See <http://www.fundforpeace.org/programs/fsi/fsindex2006.php?column=rank&>

### **Global Footprint Network**

The Global Footprint Network (GFN) is an international think tank working to advance sustainability through use of the Ecological Footprint, a resource accounting tool that measures how much nature we have, how much we use and who uses what. The GFN's National Footprint Account (2005) provides data about the human demand, biocapacity,

and ecosystem supply for 150 countries. See [http://www.footprintnetwork.org/gfn\\_sub.php?content=download](http://www.footprintnetwork.org/gfn_sub.php?content=download).

### **Global Information Technology Report (GITR): 2003-2004**

Sponsored by Cisco Systems, the Global Information Technology Report (GITR) is a joint project between INSEAD Business School, the World Bank, and the World Economic Forum, drawing upon several key indicators of the economy and technology readiness in a country. The Networked Readiness Index (NRI), a comparative and benchmarking framework that is the highlight of the GITR project, was developed at INSEAD in order to capture the state of the technology readiness in 134 countries worldwide. The NRI is a nation's degree of preparation to participate in and benefit from information and communication technology (ICT) developments. See [http://www.weforum.org/pdf/Gcr/GITR\\_2003\\_2004/Framework\\_Chapter.pdf](http://www.weforum.org/pdf/Gcr/GITR_2003_2004/Framework_Chapter.pdf).

### **Global Trade Analysis Project (GTAP Database, Release 7)**

The Global Trade Analysis Project (GTAP), established in 1992, is devoted to developing a global database for bilateral trade patterns, production, consumption, and intermediate use of commodities and services. The database is updated on a bi-annual cycle and detailed information on data, methodology of estimation, and sources of data are available at [www.gtap.agecon.purdue.edu](http://www.gtap.agecon.purdue.edu). The GTAP database has become a standard, perhaps the standard source of information on intersectoral flows and intercountry trade of a large number of research projects.

Researchers throughout the world use this database for analyzing the impact of: global trade liberalization under a future WTO round, regional trade agreements, economic consequences of attempts to reduce carbon dioxide (CO<sub>2</sub>) emissions via carbon taxes, and domestic impacts of economic shocks in other regions.

GTAP has released seven versions since 1993. The most recent GTAP database, version 7, contains input output matrices for 113 countries and regions covering 57 sectors. This version successfully added 25 new regions, new trade and protection data, and improved data on bilateral services trade energy. The Center for Global Trade Analysis and the GTAP Network, consisting of individuals, agencies, and institutions from around the world, have developed the GTAP database. IFs is currently using Release 7 which covers 113 countries.

### **Heritage Foundation**

The Heritage Foundation, in collaboration with the Wall Street Journal, publishes the Index of Economic Freedom. The 2009 Index covers 183 countries and assesses economic freedom in ten different areas of the economy, including trade policy, monetary policy, and fiscal burden. See <http://www.heritage.org/Index>.

**Hillebrand, Evan**

Dr. Evan Hillebrand, formerly of the Strategic Assessments Group in the Central Intelligence Agency and now with the Economic Security Group, has kindly provided periodic updates created by him of data on GDP at purchasing power parity. These data have global coverage by country and have been very useful in keeping the IFs model up to date on this key variable, while the project has awaited releases of GDP from other sources, like the World Bank, that provide them only with a substantial time lag.

**Institute of Environmental Management and Assessment (IEMA)**

The Institute of Environmental Management and Assessment (IEMA) is a non-profit membership organization established to promote best practice standards in environmental management, auditing and assessment. A 2005 partnership with General Motors (GM) to create new hybrid engine technology led the IEMA to collect data on annual automobile sales, which is used in the IFs database. See <http://www.iema.net>.

**Institute for Health Metrics and Evaluation (IHME)**

The Institute for Health Metrics and Evaluation (IHME) at the University of Washington aims to provide high quality information on population health, its determinants, and the performance of health systems. IHME provides data from 1970 to the present focusing on five areas: Health Outcomes; Health Services; Resource Inputs; Decision Analytics; and Evaluations. See <http://www.healthmetricsandevaluation.org>.

### **International Association for the Evaluation of Educational Achievement (IEA)**

The International Association for the Evaluation of Educational Achievement (IEA) is an independent, international cooperative of national research institutions and governmental research agencies. The IEA works in collaboration with the International Study Center (ISC) at the Lynch School of Education at Boston College to produce two studies to measure trends in student achievement in mathematics and science and literacy, the Progress in International Reading Literacy Study (PIRLS) and the Trends in International Mathematics and Science Study (TIMSS). As of April 2009, 43 educational series are included in the IFs database.

PIRLS 2006 is the second in a cycle of internationally comparative reading assessments conducted every five years to measure trends in children's reading literacy achievement and policy and practices related to literacy. PIRLS examines three aspects of reading literacy of fourth-grade students: processes of comprehension, purposes for reading, and reading literacy behavior and attitudes. Student achievement was based on responses to PIRLS test questions designed to assess a range of comprehension processes. Data was collected using parent, teacher, and school questionnaires administered by countries' national education systems. See [http://timssandpirls.bc.edu/PDF/P06\\_IR\\_Ch2.pdf](http://timssandpirls.bc.edu/PDF/P06_IR_Ch2.pdf).

TIMSS 2003 is third in a cycle of internationally comparative math and science assessments conducted every four years to collect measure trends in student achievement in mathematics and science. Data is collected on educational achievement at the fourth and eighth grade levels and is based on students' completion of the TIMSS mathematics assessment. 50 countries participate in TIMSS and the study is coordinated by the IEA International Study Center located at Boston College, United States and is funded by the participating countries with support from the World Bank, the United States Department of Education through the National Center for Education Statistics, and the United Nations Development Program. See [http://timssandpirls.bc.edu/PDF/t03\\_download/T03\\_M\\_Chap1.pdf](http://timssandpirls.bc.edu/PDF/t03_download/T03_M_Chap1.pdf).

### **International Diabetes Federation: World Diabetes Atlas**

The World Diabetes Atlas 3<sup>rd</sup> edition (2006) provides statistical information for more than 200 countries on the prevalence of diabetes in different age groups. The publication is put out by the International Diabetes Federation (IDF), a worldwide alliance of over 200 diabetes associations in more than 160 countries whose mission is to promote diabetes care, prevention and a cure worldwide. See <http://www.eatlas.idf.org>.

### **International Energy Agency (IEA)**

The International Energy Agency commenced its operation in 1974 under the auspices of the Organization for Economic Co-operation and Development (OECD). The IEA is the energy forum for 26 Member countries, all from the OECD, to improve the world's energy supply and to promote reliable databases for energy-related information. IEA member governments are committed to sharing energy information, to co-ordinating their energy policies and to co-operating in the development of rational energy programs. IEA

publishes monthly reports on electricity, natural gas, prices, and the oil market. *World Energy Outlook*, a biannual publication of IEA is considered very useful among academicians. See <http://www.iea.org/Textbase/stats/index.asp>.

Other IEA sources IFs uses are the publications Energy Balances of OECD Countries and Energy Balances of Non-OECD Countries, which contain data on the supply and consumption of coal, oil, gas, electricity, heat, renewables and waste for OECD countries and over 100 non-OECD countries. Historical tables summarise production, trade and final consumption data as well as key energy and economic indicators. See <http://www.iea.org/Textbase/stats/index.asp>.

### **International Monetary Fund (IMF)**

The IMF is one of several international agencies that historically collect and process statistics on national accounting and balance of payments for its member countries, which include almost all sovereign member countries of the United Nations. The Fund's statistics include some widely used databases in the academic arena, namely, Balance of Payments and International Investment Position (IIP) Statistics, External Debt Statistics, Government Finance Statistics, International Financial Statistics (IFS) Online Service, World Economic Outlook Databases, etc. International Financial Statistics is a standard source of international statistics on all aspects of international and domestic finance; it contains time series data from 1948 and provides data on exchange rates, international liquidity, international banking, money and banking, interest rates, prices, production, international transactions, government accounts, and national accounts.

The IMF, jointly with the Bank for International Settlements (BIS), the Organization for Economic Co-operation and Development (OECD), and the World Bank, disseminates data on external debt, which are obtained primarily from creditor and market sources. The data cover the external debt of developing and transition countries and territories, and also include statistics on international reserves. See <http://www.imfstatistics.org/imf>.

### **The International Organization of Motor Vehicle Manufacturers**

Founded in Paris in 1919, the purpose of the International Organization of Motor Vehicle Manufacturers ("Organisation Internationale des Constructeurs d'Automobiles," OICA) is to defend the interests of the vehicle manufacturers, assemblers and importers. The IFs system uses data on vehicle production by country. See [www.oica.net](http://www.oica.net).

### **International Telecommunications Union (ITU): World Telecommunication Indicators Database (12<sup>th</sup> edition 2008)**

The World Telecommunication Indicators Database is one of the various data sources that have been used in IFs system for analyzing the size of the Information Communications Technology (ICT) sector in economies. The World Telecommunication Indicators Database, launched by ITU, contains time series data for the years 1960, 1965, 1970 and annually from 1975-2007 for around 80 sets of telecommunication statistics and is categorized into telephone network size and dimension, mobile services, quality of

service, traffic, staff, tariffs, revenue and investment. Selected demographic, macro-economic, broadcasting and information technology statistics are also included. The database encompasses data for over 200 economies. It can be purchased either in CD-ROM or in printed version. ITU claims that the database is updated and revised approximately every three months. Detailed information about World Telecommunication Indicators is available at <http://www.itu.int/ITU-D/ict/publications/world/world.html>.

### **Inter-Parliamentary Union (IPU)**

Founded in 1889, the Inter-Parliamentary Union (IPU) is the international organization of Parliaments of sovereign States. The IPU works in close cooperation with the United Nations (UN) to promote world-wide parliamentary dialogue and works for peace and cooperation among peoples and for the firm establishment of representative democracy. The IPU's database on Women in National Parliaments collects data on 188 countries on the percentage of women in the lower and upper house. See <http://www.ipu.org/wmn-e/classif.htm>.

### **Johns Hopkins University Institute for Policy Studies: Comparative Nonprofit Sector Project**

The Johns Hopkins Comparative Nonprofit Sector Project is a systematic effort to analyze the scope, structure, financing, and role of the private nonprofit sector in a cross-section of 41 countries around the world in order to improve the knowledge and theoretical understanding of this sector, and to provide a sounder basis for both public and private action towards it. See <http://www.jhu.edu/~cnp/>.

### **Joint Monitoring Program for Water Supply and Sanitation (JMPWSS)**

The JMPWSS is an initiative by the World Health Organization (WHO) and United Nations Children Fund (UNICEF) to collect information related to water supply and sanitation. The IFs system uses 12 data series on safe water access collected at five year intervals from 1990-2004. Data comes from the 2006 publication, Meeting the MDG Drinking Water and Sanitation Target: The Urban and Rural Challenge of the Decade. Geneva, World Health Organization and United Nations' Children Fund: 41pp. See <http://www.wssinfo.org/en/welcome.html>.

### **Militarized Interstate Disputes (MIDS)**

The Correlates of War (COW) project at the University of Michigan originated the MIDS database. The COW project was transferred in the late 1990s to Penn State (COW 2), initially under the leadership of Stuart Bremer and with NSF sponsorship to update several databases including MIDS. As of November, 2002, the project continues under the leadership of Interim Director D. Scott Bennett, and Associate Director Glenn Palmer. As of January 2005, the project continues under Director Paul Diehl, and Associate Director D. Scott Bennett. See <http://www.correlatesofwar.org>.

An interim update of MIDs was used by Dr. Mark Crescenzi of the University of North Carolina to provide initial conditions and parameters for the IFs formulation of interstate conflict potential.

### **National Science Foundation (NSF): Science and Engineering Indicators**

The National Science Foundation (NSF) is an independent federal agency created by the United States Congress in 1950 to promote the progress of science; to advance the national health, prosperity, and welfare; and to secure the national defense. The NSF Science and Engineering Indicators (2000) present trends in U.S. and international research and development funds and alliances, in the S&E workforce, in science and mathematics education, and in public attitudes and understanding of science and engineering. See <http://www.nsf.gov/statistics/seind00/>.

### **Oil and Gas Journal**

The *Oil and Gas Journal* publishes an edition late in each year that provides estimates of oil and natural gas reserves by country. These estimates may be the most widely used source of such data. They are collected from industry sources. See <http://ogj.pennnet.com/home.cfm>.

### **Organization for Economic Cooperation and Development (OECD): Basic Science and Technology Statistics 2000**

Basic Science and Technology Statistics provide recent information in electronic format on the resources devoted to R&D in OECD countries. The statistical series start from 1981 and cover expenditure by source of funds, type of costs, personnel by occupation and level of qualification. The database provides comprehensive information at the national level by performance sector, for enterprises by industry, and for higher education by field of science. Basic Science and Technology Statistics are also published every two years in print and the database is available on line at [www.sourceoecd.org](http://www.sourceoecd.org).

### **Organization for Economic Cooperation and Development (OECD): Online Education Database**

The OECD Online Education Database is compiled on the basis of national administrative sources, reported by Ministries of Education or National Statistical offices according to international standards, definitions and classifications. The collected annual data cover the outputs of educational institutions, the policy levers that shape educational outputs, the human and financial resources invested in education, structural characteristics of education systems, and the economic and social outcomes of education. The purpose of this database is to produce and publish indicators and analysis on the operation, evolution and impact of education, from early childhood through formal

education to learning and training throughout life. The main publications based on these data are the annual publications *Education at a Glance* and *Education Policy Analysis*. See [www.oecd.org/education/database](http://www.oecd.org/education/database).

Education at a Glance Indicators provides a rich, comparable and up-to-date array of indicators on the human and financial resources invested in education, on how education and learning systems operate and evolve, and on the returns to educational investments. The OECD Education at a Glance Indicators are published by the Directorate for Education of the OECD. See [http://www.oecd.org/document/52/0,3343,en\\_2649\\_39263238\\_37539316\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/52/0,3343,en_2649_39263238_37539316_1_1_1_1,00.html)

### **Organization for Economic Cooperation and Development (OECD): Program for International Student Assessment (PISA)**

The OECD Program for International Student Assessment (PISA) is an internationally standardized assessment that was jointly developed by participating countries and administered to 15-year-olds in schools. The survey was implemented in 43 countries in the 1st assessment in 2000, in 41 countries in the 2nd assessment in 2003, in 57 countries in the 3rd assessment in 2006 and 62 countries have signed up to participate in the 4th assessment in 2009. The PISA database contains information on student performance in different subjects, and student attitudes and approaches to learning. The survey was administered to students, senior administrators in the school of the sampled students and a parent questionnaire for countries that chose for this international option. See <http://pisa2006.acer.edu.au/interactive.php>.

### **Organization for Economic Cooperation and Development (OECD): Indicators of Product Market Regulation (PMR) 2008**

The OECD Indicators of Product Market Regulation (PMR) are a comprehensive and internationally-comparable set of indicators that measure the degree to which policies promote or inhibit competition in areas of the product market where competition is viable. They measure the economy-wide regulatory and market environments in OECD countries in (or around) 1998, 2003 and 2008, and are consistent across time and countries. The indicators cover formal regulations in the following areas: state control of business enterprises; legal and administrative barriers to entrepreneurship; and barriers to international trade and investment. See [http://www.oecd.org/document/36/0,3343,en\\_2649\\_34323\\_35790244\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/36/0,3343,en_2649_34323_35790244_1_1_1_1,00.html).

**Organization for Economic Cooperation and Development (OECD): Indicators of regulation in energy, transport and communications (ETCR) 2008**

The OECD indicators of regulation in energy, transport and communications (ETCR) summarise regulatory provisions in seven sectors: telecoms, electricity, gas, post, rail, air passenger transport, and road freight. The data is for 30 OECD countries from 1975-2007 and measures regulatory intensity for the seven sectors along three main variables: entry, public ownership, and vertical integration. See [http://www.oecd.org/document/32/0,3343,en\\_2649\\_34323\\_35791136\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/32/0,3343,en_2649_34323_35791136_1_1_1_1,00.html).

**Organization for Economic Cooperation and Development (OECD): International Development Statistics 2002**

International Development Statistics is a unique source of detailed information on foreign aid. It covers volume, origin and types of aid and other resource flows to over 180 aid recipient countries. Data are disaggregated into individual aid activities on bilateral/multilateral Official Development Assistance or official aid commitments by sector, donors, and recipients, with detailed information on projects. The data provide amount and composition of the external debt of 168 aid recipient countries. The database also includes key development indicators and aid charts for DAC members, recipient countries and regions.

Published by the Development Assistance Committee (DAC) of the OECD, this CD-ROM provides economists and researchers with a unique source of up-to-date comparative development statistics and information. See <http://www.oecd.org/dataoecd/50/17/5037721.htm>.

**Organization for Economic Cooperation and Development (OECD): Social Expenditure Database (SOCX 2004), 1980-2001**

The OECD Social Expenditure Database (SOCX 2004) provides data for OECD countries on social indicators. It includes reliable, up-to-date and internationally comparable statistics on public and private social expenditure at program level. SOCX 2004 provides a unique tool for monitoring trends in aggregate social expenditure and analyzing changes in its composition. It covers 30 OECD countries for the period 1980-2001. The main social policy areas include old age, disability, occupational injury, sickness benefits, survivors, family benefits, labor market programs, health, housing, etc. See [http://www.oecd.org/document/2/0,3343,fr\\_2649\\_34637\\_31612994\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/2/0,3343,fr_2649_34637_31612994_1_1_1_1,00.html).

**Organization for Economic Cooperation and Development (OECD): Main Science and Technology Indicators (MSTI)**

The OECD Main Science and Technology Indicators (MSTI), published twice yearly, provides a set of indicators that reflect the level and structure of the efforts undertaken by OECD member countries and eight non-member economies (Argentina, China, Israel,

Romania, Russian Federation, Singapore, Slovenia, Chinese Taipei) in the field of science and technology. The indicators cover the resources devoted to research and development, patent families, technology balance of payments and international trade in highly R&D-intensive industries. See <http://www.oecdbookshop.org/oecd/display.asp?sf1=identifiers&st1=1011792X>.

### **Organization for Economic Cooperation and Development (OECD): Information Technology Outlook (ITO) 2002**

The OECD Information Technology Outlook (ITO) report provides data on the information and communication technology (ICT) industry in OECD countries and a number of major non-member economies. The ITO Report provides data on the telecommunication, computer, and electronics sectors, including trade in ICT goods and services, employment by sector, and research and development (R&D) expenditure. See <http://www.oecd.org/dataoecd/63/60/1933354.pdf>.

### **Philip G. Roeder: Ethnolinguistic Fractionalization (ELF) Indices**

Philip G. Roeder, Professor of Political Science at the University of California, San Diego, computed these indices from population estimates in several sources for the years 1965 and 1985 in his 2001 paper, "Ethnolinguistic Fractionalization (ELF) Indices, Philip G. Roeder. 2001. See <http://weber.ucsd.edu/~proeder/elf.htm>.

### **Population Reference Bureau (PRB)**

For more than 70 years, the Population Reference Bureau has been working on the population dimensions of important social, economic, and political issues. It is one of the leading sources for U.S. and international population trends and their implications. PRB publishes the quarterly Population Bulletin, the annual World Population Data Sheet, and PRB Reports on America, as well as publications covering population and public policy issues in the United States and abroad, particularly in developing countries. PRB's website, [www.prb.org](http://www.prb.org), is updated approximately every three weeks with new articles and reports, frequently country- or region-specific, which span subjects as diverse as HIV/AIDS, children's environmental health, family planning, immigration, adolescent sexual health, maternal mortality, and population growth.

The IFs system used some population data series from PRB's World Population Data Sheet. This annual data sheet provides the latest population estimates, projections, and other key indicators for all geographic entities with populations of 150,000 or more and all members of the United Nations. Indicators include births, deaths, infant mortality rate, life expectancy, population, contraception usage, and others. The data sheet is accessible by the various variables or by region and country.

## **Speedtest.net**

Speedtest.net is a broadband speed analysis tool that allows one to test the speed of their Internet connection. The IFs system uses its World Results section to obtain data on top bandwidth speed by country. See <http://speedtest.net>.

## **Stockholm International Peace Research Institute (SIPRI)**

The SIPRI database provides data on military expenditure for more than 160 countries. The SIPRI Yearbook 2003 provides data for the 10-year period 1993-2002 and contains three basic formats: military expenditure in local currency, at current prices; military expenditure in US dollars, at constant (2000) prices and exchange rates; and military expenditure as a share (%) of gross domestic product (GDP). The online database is available at [http://projects.sipri.org/milex/mex\\_database1.html](http://projects.sipri.org/milex/mex_database1.html).

The sources for military expenditure data are, in order of priority: (a) primary sources, that is, official data provided by national governments, either in their official publications or in response to questionnaires; (b) secondary sources which quote primary data; and (c) other secondary sources. The second category includes international statistics, such as those of NATO and the International Monetary Fund (IMF).

The database is revised when new and better sources are available. Therefore, there is sometimes considerable variation between data sets for individual countries in different yearbooks.

## **Transparency International**

Among Transparency International's published documents, two indexes are frequently used in the academic arena: TI Bribe Payers Index and Corruption Perceptions Index.

The TI Bribe Payers Surveys are comprehensive studies on bribe-paying in international trade covering unfair business practices, assesses the readiness of the private sector for the new ban on bribing foreign public officials. The TI Corruption Perceptions Index (CPI) ranks countries in terms of the degree to which corruption is perceived to exist among public officials and politicians. The CPI conducts surveys on the misuse of public power for private benefit, with a focus, for example, on bribe-taking by public officials in public procurement.

The TI Corruption Perceptions Index (CPI), 2008 ranks 180 countries in terms of the degree to which corruption is perceived to exist among public officials and politicians. It is a composite index, drawing on 17 different polls and surveys from 13 independent institutions carried out among business people and country analysts, including surveys of residents, both local and expatriate. This composite index ranging between 10 (highly clean) and 0 (highly corrupt) indicates the perceptions of the degree of corruption as seen by business people, academics and risk analysts. The TI indexes are freely available at TI's website: <http://www.transparency.org>.

### **United Nations Conference on Trade and Development (UNCTAD): World Investment Report, 2004**

The World Investment Report focuses on trends in foreign direct investment (FDI) worldwide, at the regional and country levels and emerging measures to improve its contribution to development. The IFs system uses data on inward and outward FDI flows. See <http://www.unctad.org/Templates/Page.asp?intItemID=1465>.

### **United Nations Statistics Division: Millennium Development Goals (MDG) Indicators**

The Millennium Development Goals (MDG) database presents the official data, definitions, methodologies and sources for more than 60 indicators to measure progress towards the eight MDGs. The data and analyses are the product of the work of the Inter-agency and Expert Group (IAEG) on MDG Indicators, coordinated by the United Nations Statistics Division. Data is provided from 1989 to present on the 189 UN member countries. The IFs system uses data on health, demographics, and sanitation. See <http://mdgs.un.org/unsd/mdg/default.aspx>.

### **United Nations Statistics Division: UNESCO Institute for Statistics (UIS) Education Database**

The United Nations Statistics Division, UIS Education database is the most education comprehensive in the world, containing data from more than 200 countries and territories. The UIS has the mandate to monitor progress towards Education for All and education-related Millennium Development Goals. The statistics, which are updated twice a year, are used by diverse partners, including governments, donor agencies and other UN organizations. In particular, the UIS is the primary education data source for the Education for All Global Monitoring Report, the World Development Indicators and the Human Development Report Data is collected through the UIS annual education survey, which covers all education levels and a range of issues such as enrolment rate, gender parity, teachers, and financing. The IFs system uses data on school enrolment, educational expenditures, and literacy rates. See [http://stats.uis.unesco.org/unesco/TableViewer/document.aspx?ReportId=143&IF\\_Language=eng](http://stats.uis.unesco.org/unesco/TableViewer/document.aspx?ReportId=143&IF_Language=eng).

### **United Nations Statistics Division: Energy Statistics Yearbook**

The Energy Statistics Yearbook database provides a global framework of comparable data on long-term trends in the supply of mainly commercial primary and secondary forms of energy. Data are compiled primarily from the annual energy questionnaire distributed by the United Nations Statistics Division and supplemented by official national statistical publications. Where official data are not available or are inconsistent, the Statistics Division makes estimates based on governmental, professional, or commercial data sources.

Energy Statistics Yearbook covers annual data for 215 countries and areas. The recent published Energy Statistics Yearbook 2000 presents data for the period 1997 to 2000 on production, trade and consumption of energy: solids, liquids, gaseous fuels and electricity. In addition, per capita consumption series are also available for all energy products. Special tables of interest include international trade tables for coal, crude petroleum and natural gas by partner countries – providing information on direction of trade, selected series of statistics on fuelwood, charcoal, refinery distillation capacity and a table on selected energy resources.

The database developed under the title World Energy Supplies in Selected Years covers data for 1929-1950. Supplementary series of monthly and quarterly data on production of energy is also available in the Monthly Bulletin of Statistics. A time series can be set up from 1950 to the present from various issue of the Yearbook. See <http://unstats.un.org/unsd/energy/yearbook/default.htm>.

### **United Nations Food and Agricultural Organization (FAO): FAOSTAT**

The FAO Statistical Database contains times-series data for over 210 countries and territories covering statistics on agriculture, nutrition, fisheries, forestry, food aid, land use, and population.

FAO has assembled and published historical statistical data and other studies on fuelwood and charcoal in its Forest Products Yearbook. As part of its Wood Energy Program, the Organization is continuously reviewing and improving its wood energy information system. Among other results, this has led to the adoption of a unified wood energy terminology covering the collection, storage, interpretation, analysis, and presentation of data on the production, consumption, and marketing of biomass-derived fuels. The online FAOSTAT is available at [www.fao.org](http://www.fao.org).

### **United Nations Development Program (UNDP): Human Development Report**

United Nations Development Program publishes a widely circulated annual report, namely the *Human Development Report*, which contains indicator tables for 191 UN member countries along with Hong Kong, SAR (China) and Occupied Palestinian Territories. These countries and areas are classified in four ways: by human development level, by income, in major world aggregates and by region. All countries included in the HDI are classified into three clusters by achievement in human development: high human development (with an HDI of 0.800 or above), medium human development (0.500–0.799) and low human development (less than 0.500). It is an annual publication that is normally launched in June or July and also available online at [www.undp.org](http://www.undp.org).

The HDI (human development index) is a composite index that measures a country's average achievements in three basic areas of human development: longevity, knowledge, and a decent standard of living. Longevity is measured by life expectancy at birth; knowledge is measured by a combination of the adult literacy rate and the combined primary, secondary, and tertiary gross enrolment ratio; and standard of living by GDP per capita (PPP US\$).

### **United Nations Population Division: World Population Prospects (The 2002 Revision Population Database)**

The 2002 Revision Population Database, annually published by the United Nations Population Division of the Department of Economic and Social Affairs of the United Nations Secretariat, is a comprehensive data source for world population and official estimation of world population and projections. The 2002 Revision is the eighteenth round of global demographic estimates and projections undertaken by the Population Division since 1950. The database provides major demographic indicators like birth rate, death rate, mortality rate, fertility rate etc. for each member country of United Nations for 1950-2050 by age and sex of the population. This database provides demographic distribution for 20 age-cohorts by sex. In all datasets, figures for 1950-2000 are estimates and those for 2000-2050 are projections. In case of projection, the database has been organized in four sets of variants: low, medium, high, and constant. Detailed information of the database is available at [www.un.org/esa/population/unpop.htm](http://www.un.org/esa/population/unpop.htm). Thomas Buettner of the Population Division was kind enough to provide data from the 2002 revision to the IFs project.

### **United States Central Intelligence Agency (CIA): The World Factbook**

The CIA's Directorate of Intelligence produces the *World Factbook*, which is available online and in print. The Factbook has gathered a comprehensive resource of facts and statistics on more than 250 countries and other entities. The annual printed version of the Factbook is usually released about midyear. Earlier the online version was updated once annually. Since 2001, however, CIA arranged for more frequent updates to accommodate recently available information. The site address for the CIA Factbook is <http://www.cia.gov/cia/publications/factbook/index.html>.

The Factbook organizes data for each country or territory in these categories: geography, people, government, economy, communications, transportation, military transnational issues. The World Factbook online version adds seven new entries, namely, median age, oil production, oil consumption, oil exports, oil imports, oil reserves. The web site version features four additional entries: natural gas production, natural gas consumption, natural gas exports, and natural gas imports. An update for several regional maps also has been made to reflect recent boundary changes.

### **United States Census Bureau: International Programs Center**

The International Programs Center, part of the Population Division of the U.S. Census Bureau, conducts demographic and socioeconomic studies and strengthens statistical development around the world through technical assistance, training, and software products. Its work is commissioned and funded by federal agencies, international organizations, non-governmental organizations, private businesses, and other governments. The IFs system uses data on population and population growth from the International Data Base (IDB). See <http://www.census.gov/ipc/www/idb/>.

### **United States Department of State: World Military Expenditures and Arms Transfers**

The U.S. Department of State's Bureau of Arms Control has taken over from the former Arms Control and Disarmament Agency the job of compiling annual reports on world military spending and arms transfers. This has become one of the most widely-respected sources of information in this area. The IFs project has pieced together the series on military spending over large numbers of volumes by relying on expenditures as a portion of GDP. See <http://www.state.gov/t/vci/rls/rpt/wmeat>.

### **United States Geological Survey (USGS) World Petroleum Assessment**

The *US Geological Survey (USGS) World Petroleum Assessment 2000* provides estimates of the quantities of conventional oil, gas, and natural gas liquids remaining to be found in the world. See <http://pubs.usgs.gov/dds/dds-060/index.html#TOP>.

### **Uppsala Conflict Data Program (UCDP)**

The Uppsala Conflict Data Program (UCDP) collects information on a large number of aspects of armed violence since 1946. Since the 1970s, the Uppsala Conflict Data Program (UCDP) has recorded ongoing violent conflicts. The IF system uses data from the report on States in Armed Conflict, which contains information on current numbers of armed conflicts, definitions of variables, descriptions of methods and sources and human security. See <http://www.pcr.uu.se/research/UCDP>.

### **Webhosting.Info**

WebHosting.Info is a research and statistics portal primarily dedicated towards the web services industry. Its purpose is to continuously release data presenting micro and macro statistics about the web services industry and to provide statistical trends and patterns across countries. It also provides data on IP addresses, domain names, web servers, operating systems and other variables related to the web services industry. IFs uses data on total internet domains in country. See [http://www.webhosting.info/domains/country\\_stats/?pi=3&ob=TOTAL&oo=DESC](http://www.webhosting.info/domains/country_stats/?pi=3&ob=TOTAL&oo=DESC)

### **World Bank: World Development Indicators**

The most extensive and reliable source for socio-economic and development data is probably World Bank's annually published World Development Indicators (WDI) database. The recent WDI, published in 2008, has approximately 800 indicators for 209 economies. Economies in WDI have been organized in 18 groups based on income, geography, and indebtedness criteria. Data in the WDI database are categorized in six major areas: overview, people, environment, economy, states and markets, and global links.

The major advantage of the WDI database is that it has longer time series coverage, for example, most of the indicators cover data since 1960. The World Bank collects data for

particular series from the organizations who are pioneers in those areas. For example, WDI compiles external account data, like export, import, current account, debt etc. from the International Monetary Fund (IMF), and population data from United Nations Population Division. Major data sources for WDI are World Bank national accounts data, OECD National Accounts, Food and Agriculture Organization, United Nations Educational, Scientific, and Cultural Organization, World Health Organization, International Labor Organization, International Telecommunication Union etc. WDI database are available in three formats- online (<https://publications.worldbank.org/subscriptions/WDI/>), published report in hard copy and CDROM version.

Some financial data series from the WDI database, used in IFs analysis, have been converted into billion US\$ from current prices at US\$ and some series related to population have been transformed into million figures. The IFs system also needed to calibrate some data series as percent of GDP in constructing social accounting matrices.

### **World Bank: Governance Indicators**

The IFs system has collected information on governance quality from “Governance Matters VII: Governance Indicators for 1996–2007”, a World Bank Policy Research Working Paper published in 2008, authored by D. Kaufmann A. Kraay, and M. Mastruzzi. The dataset provides estimates of six dimensions of governance covering 212 countries and territories for four time periods: 1996, 1998, 2000, 2002, and 2004-2006.

These indicators are estimated based on various individual variables measuring perceptions of governance. The governance indicators dataset collected information from 25 separate data sources constructed by 18 different organizations. The governance indicator dataset was initiated in 1998 and grouped in as six dimension of governance: Voice and Accountability, Political Stability and Absence of Violence, Government Effectiveness, Regulatory Quality, Rule of Law, Control of Corruption. The dataset and detailed methodological description is available at <http://info.worldbank.org/governance/wgi2007>.

### **World Bank: PovcalNet Online Poverty Analysis Tool**

*PovcalNet* is an interactive computational tool that allows you to replicate the calculations made by the World Bank's researchers in estimating the extent of absolute poverty in the world, including the \$1 a day poverty measures, as published in the background papers by Chen and Ravallion and in the *2007 World Development Indicators*. See <http://iresearch.worldbank.org/PovcalNet/jsp/index.jsp>.

### **World Database of Happiness**

The World Database of Happiness is an ongoing register of scientific research on the subjective enjoyment of life. The database is directed by Ruut Veenhoven at Erasmus University Rotterdam. The IFs system uses the index of average happiness in the general population during the 1990s. See <http://worlddatabaseofhappiness.eur.nl>

### **World Economic Forum: Global Competitiveness Report 2004-2005**

Founded in 1971, the World Economic Forum is an independent international organization committed to improving the state of the world by engaging leaders in partnerships to shape global, regional and industry agendas. The *Global Competitiveness Report* is the World Economic Forum's flagship publication and assesses the ability of countries to provide high levels of prosperity to their citizens. The report provides data on the competitiveness and quality of 131 national economies by means of the Global Competitiveness Index, which measures the set of institutions, policies, and factors that set the sustainable current and medium-term levels of economic prosperity. The IFs system uses data on the quality and competitiveness of public institutions, education, infrastructure, technology, and economic growth. See <http://www.weforum.org/en/initiatives/gcp/Global%20Competitiveness%20Report/PastReports/index.htm>.

### **World Energy Council (WEC)**

The World Energy Council (WEC) is the foremost multi-energy organization in the world. WEC has Member Committees in nearly 100 countries, including most of the largest energy-producing and energy consuming countries. Established in 1923; the organization provides data on all types of energy, including coal, oil, natural gas, nuclear, hydro, and renewables. The World Energy Council is perhaps the only source of extensive analyses of ultimate resources for fossil fuels, which it provides by country in a publication called the *Survey of Energy Resources*. The publication details 16 key energy resources with data provided by 96 WEC Member Committees worldwide. See <http://www.worldenergy.org/default.asp>

### **World Health Organization: Department of Public Health and Environment**

The Department of Public Health and Environment provides data on indoor and outdoor air pollution, children's environmental health, water sanitation health. Ifs uses data on deaths per year from air pollution, deaths from diarrhoea, See [http://www.who.int/quantifying\\_ehimpacts/national/countryprofile/intro/en/index.html](http://www.who.int/quantifying_ehimpacts/national/countryprofile/intro/en/index.html)

### **World Health Organization (WHO): Global Health Atlas**

The World Health Organization (WHO) provides national statistics for 70 core indicators on mortality, morbidity, risk factors, service coverage, and health systems. WHO publishes the Global Health Atlas, which contains data and statistics for infectious diseases at country, regional, and global levels. IFs uses data on: access to safe drinking water and sanitation facilities, inequities in health care and health outcomes, and mortality patterns (life tables). See <http://www.who.int/research/en/>.

### **World Health Organization: Statistical Information System (WHOSIS)**

The WHO Statistical Information System (WHOSIS) is an interactive database bringing together core health statistics for the 193 WHO Member States on more than 70 indicators. The data can be accessed online and are also published annually in the World Health Statistics Report. IFs uses data various measures including diabetes risk, mortality and burden of disease, obesity, tobacco smoking prevalence, and life expectancy. See [http://www3.who.int/whosis/core/core\\_select.cfm](http://www3.who.int/whosis/core/core_select.cfm).

### **World Health Organization: World Malaria Report (2008)**

The World Malaria Report 2008 provides data on the 109 countries/territories affected by malaria, including the global distribution of cases and deaths, prevention and treatment, and financing malaria control. IFs uses data on the total number of malaria deaths. See <http://www.who.int/malaria/wmr2008/>

### **World Health Organization: World Health Report**

The World Health Report, first published in 1995, is WHO's leading publication. The annual report combines an expert assessment of global health, including statistics relating to all countries, with a focus on a specific subject. IFs uses data on a variety of measures including: health system performance; health care coverage and equity; and health care spending. See <http://www.who.int/whr/en/index.html>.

### **World Health Organization: Surveillance of Chronic Disease Risk Factors Report (SuRF2)**

The Surveillance of Chronic Disease Risk Factors (SuRF2) Series is an on-going surveillance activity for the WHO Department of Chronic Diseases and Health Promotion. The report provides country profiles and data on eight causal risk factors of chronic disease, including tobacco use, alcohol consumption, fruit and vegetable intake, obesity, blood pressure, cholesterol, physical activity, and diabetes. The SuRF2 report updates the country profiles provided by SuRF1 in 2003. IFs uses data on obesity. See <http://www.who.int/infobase/surf2/start.html>.

### **World Information Technology and Services Alliance (WITSA): Digital Planet**

The World Information Technology and Services Alliance has published several editions of *The Digital Planet: The Global Information Economy*. These volumes provide extensive information about the size of information and communications sectors and the emerging “New Economy.” IFs has been able to use some information on the overall size of the sector and the sizes of software and computing industries. See <http://www.witsa.org>.

### **World Resources Institute (WRI): EarthTrends**

EarthTrends, launched by World Resources Institute (WRI) in 2001, is a specialized data source for environmental and sustainable development information. EarthTrends gathers data from the world's leading statistical agencies like the World Bank, the IMF, the IFPRI, etc., along with WRI. To facilitate the comparison of data from different sources, EarthTrends supplements its content with detailed metadata that report on research methodologies and evaluates the information's reliability. The database is available free for public use online at <http://earthtrends.wri.org>.

The database is organized in ten topic areas, namely agriculture and food, biodiversity and protected area, climate and atmosphere, coastal and marine ecosystems, economics, energy and resources, environmental governance and drylands, population, and water resources and freshwater ecosystem. Most of series in the EarthTrends database cover time-series information since 1960. EarthTrends contain more than 200 country profiles for over 500 variables. The EarthTrends also include data tables, maps, and feature stories on a variety of environmental, social, and economic topics.

Some financial data series of EarthTrends database, used in IFs analysis, have been converted into billion US\$ from current prices at US\$ and some series related to population have been transformed into million figures.

### **World Value Survey (WVS)**

The World Values Survey is a world-wide consortium of investigators focused on understanding socio-cultural and political change. Under the leadership of Ronald Inglehart at the University of Michigan, the project has undertaken five waves of surveys, the first in 1981 and the most recent in 2005-2007. Surveys have now covered 66 countries (in one or more waves), representing more than 80 percent of the world's population.

Extensive sets of questions have characterized each wave. Analysis has, however, identified two orthogonal dimensions of values that persist across waves and that together organize responses to many of the socio-cultural questions. The project has labeled these traditional/secular-rational and survival/self-expression. In addition, a pattern of movement from moderns to post-modernist orientations has been discovered that characterizes societies. Ronald Inglehart has been kind enough to provide data on each of these three dimensions across all five waves. In addition, he has provided data on responses to a substantial number of individual questions from the first three waves. The IFs project has worked with Inglehart in structuring the first efforts to forecast value change on the two primary underlying dimensions. See <http://www.worldvaluessurvey.org>.

## Various Additional and Legacy Data Sources

There are a substantial number of additional sources from which IFs has been fortunate enough to draw data over the years. In many cases only one or a small number of series remain in the database and in most cases the data are no longer used in the model itself. The sources are appreciated, however, and should be acknowledged. They include:

- Evaluation Project, University of North Carolina. Annual datasheet on Family Planning Programs prepared by the Population Reference Bureau, Washington, D.C. See also Ross, J.A. and W.P. Mauldin, 1996. "Family Planning Programs: Efforts and Results, 1972-94," *Studies in Family Planning* 27, no. 3: 137-47. Data on family planning effort levels.
- Gurr, Ted Robert, Monty Marshall and colleagues at the University of Maryland and the State Failure Project. Data on state failures events in ethnic violence, genocide, revolution and abnormal regime change.
- Heston, Alan and Robert Summers. Penn World Tables. See <http://datacentre2.chass.utoronto.ca/pwt/>. Economic data at purchasing power parity.
- Masters, Charles D., Emil D. Attanasi, and David H. Root. 1994. "World Petroleum Assessment and Analysis" in *Proceedings of the 14th World Petroleum Congress*, Stavanger, Norway. New York: John Wiley and Sons. Data on ultimate petroleum and gas resources.
- Sivard, Ruth Leger. Biannual for many years. *World Military and Social Expenditures* Washington, D.C. 20007: World Priorities, Box 25140. Data on educational, health, and military expenditures, and on literacy.
- Sentencing Project, The. Web site at <http://www.sproject.com>. Washington, D.C. Data on prisoners per 100,000 population.
- World Health Organization. Annual *World Health Statistics*. Data on suicide rates, used for historical series.
- Watson, Andrew. Private communication on agricultural losses. Dr. Watson, Food Systems International Corporation of Berkeley, CA (510-526-4410) confirmed estimates that the poorest LDCs typically lose 50% of harvests before consumption, in contrast with 15% in richest MDCs. Used for the values of LOSS and its function with GDP per capita.
- Mori, Shunsuke and Masato Takahaashi, "An Integrated Assessment Model for the Evaluation of New Energy Technologies and Food Production," unpublished paper accepted by the International Journal of Global Energy Issues (January

1997). Indicate that a hectare of forest absorbs about 10 tons of carbon from the atmosphere (p. 6).

## The Data Series Available

Sl. No.	Definition	Variable	Group	SubGroup	Source
